

M2M for the Automotive Market

Guiding through the M2M ecosystem

SimService is a wireless service provider, specialized in M2M communication worldwide. We have had great success in guiding enterprises and organizations through the complexity of the M2M ecosystem.

Our success comes from years of hands-on experience and a strong network of global partners.

Proven Services

Supported by a dedicated team of professionals, all SimService's products and services are aligned with current and emerging demands of the automotive industry.

Our service offerings include particular expertise in SIM cards, M2M deployment and asset management. Hence, we understand the key issues that confront your business and can help you to meet the challenges of M2M.

A Standard Delivery Includes:

- **SIM cards** specially designed to meet the requirements of the automotive market, i.e. temperature range, vibration and humidity tolerance
- **Subscriptions** supporting various business models
- **Worldwide connectivity** ensured with the help of our connectivity partners around the world. Our high quality network solution gives connection to 2-4 operators per country. To get the best coverage, the SIM cards always connect to the network with best signal strength
- **An integrated connectivity platform with simple APIs** developed and hosted by SimService
- **Rapid industrial deployment solutions** fully supported by our technical expertise and through our business partners
- **Controlled logistics of the entire SIM process** with real-time communication, making coordination easier for all parties involved

Example: From Factory to Consumer

Enhance Your Business

With SimService, you will discover the added value that M2M solutions bring to your business processes.

By using M2M to automate operational processes, you will be able to deliver a seamless out-of-the-box experience, from mounting the SIM cards, to deployment, to running the daily operation.

Our M2M solutions specifically address the following three main issues: Supply Chain Management, logistic and integration.

Just a Click Away from Knowing Where Goods are in the Supply Chain

Providing you with a real-time overview, the SimService Platform enables you to keep track of, monitor and control all your SIM cards. Knowing where your SIM cards are, you will be able to reduce inefficiencies as to time, inventories and cost so that you improve your time to market.

Improving Logistical Coordination with Transparency and Real-Time Communication

With the help of SimService, you will be capable of making logistical coordination easier for all parties involved. Controlling the entire SIM process, you will know the exact status of your goods and be able to monitor information and transmit in real-time to cut off problems, before they become serious.

Full Integration – All in a Single System

Through our APIs, you will have access to all the functionalities of the SimService Platform. The functionalities can be added to the system that you are currently using by integrating your system with our APIs.

SimService will continuously support your business with first class service and ongoing feature updates.
